America's Finest Everblooming ROSES

SELECTED WESTERN GROWN, 2-YEAR XX,
HEAVY PLANTS—READY TO BLOOM

PEACE

(Patent No. 591)

Won the All-America Rose Award last year with highest score ever given a new Rose. Perfect buds slowly open into large, fully double fragrant flowers. At first the buds are a rich gold edged cerise. As the outer petals unfold the gold changes to canary, then lightens to cream. The cerise edge gradually deepens and becomes broader so the fully open flower appears a sparkling cerise with a creamy yellow base.

Dear Friends:

For 64 years we have served the farmers and planters of Missouri and our surrounding states; this fact should speak well for our dependability. When we tell you that you can send your order to ARCHIAS with complete confidence, we mean just that! Your order will be filled promptly and we guarantee everything to reach you in a satisfying condition. If you are not entirely pleased when the merchandise arrives, it may be returned within five days for complete refund of your money or have your order refilled without charge. You are to be the judge and you are to be pleased or it costs you nothing.

We hope you are making plans for a big Freedom Garden this year. At this writing the demand for food for Europe is appalling and because of this demand the prices at the stores are at an all time high. There is no better way to assure plenty of food for your own family and to help relieve the demand in commercial food channels than by producing your own. The average gardener can save hundreds of food dollars in a year's time with a well-planned garden.

We believe that everyone should consider the planting of Nursery Stock, Fruit Trees, and Berry Plants. Now, when you can afford to improve your place, have fruit of your own for years. The economy of the country may not be so good later. Let us all look ahead and plan for the future.

We shall be expecting your orders. We hope that you will send them in early. We assure you that we will do our best to please you.

Sincerely yours,
ARCHIAS' SEED STORE,
L. H. Archias, Jr., Pres.

ARCHIAS' GUARANTEE

Because we grow and sell large quantities of Seeds, Nursery Stock, etc., we can sell first quality stock at reasonable prices. Our liability, in all instances, is limited to the purchase price of the seeds, bulbs or plants.

ARCHIAS' MISSOURI 8

Main Crop Yellow—120-125 days

Developed by Mo. Agricultural College. In use for 8 years. In 6-year trials in Missouri, out-yielded Reid's Yellow Dent 36 per cent. A smooth, yellow corn, not flinty, prolific, tending to two or more good ears on fair soil and in good season. Big-rooted, strong-stalked, making it drought- and wind-resistant. Is also disease-resistant. Dark green foliage.

ARCHIAS' "SPECIAL STRAIN" U. S. 13

Main Crop Yellow—120-125 days

A grand hybrid in every way and very popular throughout the corn belt. Single ear tendency. Deep kernels high in feeding value. Resistant to drought and chinch bug. Shucks easily. Stands up well. The first hybrid to ever win the Grand Championship at the International in Chicago, in both 10-ear yellow and shelled corn class.

ARCHIAS' "STATE CERTIFIED" U. S. 13

Some folks prefer State Certified Seed and we believe they are right in most instances. We have a good certified grower, one of the State's best, to produce our supply of "Certified" U. S. 13. His seed fields were among the finest in Missouri this year. The seed is well graded. You'll be well pleased. Price: 50c per bushel more than Archias' Special Strain.

MISSOURI 148 120-125 days

Seed supply of this new variety very limited. Order at once before we are sold out. Missouri 148 parentage is similar to Missouri 8; however, in breeding this new hybrid the undesirable features of Missouri 8 have been removed, retaining the good features and many of the good features of U. S. 13 have been added.

A very tall hybrid with deep green foliage. Ears borne high, are long and somewhat tapering. Kernels medium yellow with medium indentation. Resistant to lodging under most conditions. Best adapted to the area south of the Missouri river. No. 148 was near the top in many of the state yield tests.

UNITED HYBRID

THE CORN OF PLENTY

"Kernel-Coated" means 10 to 13 extra bushels per acre. Write for special "United Hybrid" Corn catalog.

U47 (110 to 115 days.) **THE LARGE-EARED HYBRID.** This is the large-eared hybrid with a Reid-type, cylindrical ear of reddish cast. Exceptionally high feeding quality and shelling percentage and is noted because cattle prefer it. Protein is well balanced to make perfect feeding.

U50 (115 to 120 days.) This hybrid is noted not only for its high yield but its vigorous growth and ability to "take it" despite the weather. Stands early cold in the spring, ravages of insects, high winds, drought and still comes through with a heavy crop. Ear height about 3½ ft. Adapted to average soils.

U59 **THE WIDELY ADAPTED HYBRID.** (120 to 125 days.) Adapted over wide area doing best on average soil but performing well on almost all soil types with yields of 120 bushels or more common. Has high lodging resistance, medium large stalk and medium foliage. Ear height regular at 4 ft. Easy to pick, hand or machine.

U67 (125 to 130 days.) Has an outstanding record for heat and drought resistance and high yield. Dark green leaves and strong stalk. Clean picking and shucking make this variety unsurpassed over a wide area from Eastern Kansas and Central Missouri to Oklahoma and in Arkansas. A long time yield winner in the upper delta. Has a rougher dent than formerly and is a leader in its field.

U68 **THE NEW LATE HYBRID.** (130 to 135 days.) This is United's newest and heaviest yielding of the late hybrids, consistently topping 100 bus. per acre in yields. Very large, medium rough ear. Large thick stock that stands well.

This is Missouri's best known variety, but all Reid's Dent is by no means equal in production. Many strains have been allowed to deteriorate. Archias' Missouri State Certified is grown by Missouri's best known seed corn grower—he has won first prizes consistently wherever this corn is shown. Painstaking selection and constant supervision has made this strain "tops" for Reid's Yellow Dent. The average maturity is 110 days. Ears 9 to 13 inches long—well filled out from tip to butt with deep, close set grains—Order Early! The supply of this fine seed is limited. Price by mail, postpaid: 1 lb., 25c; 5 lbs., 60c. By freight or express: ½ bu., \$3.20; 1 bu., \$5.95; 2 bus., \$11.50; 5 bus., \$27.50.

ARCHIAS' 90-Day Yellow

A quick growing yellow variety, highly desirable and popular with feeders who want an early feeding Corn. Matures in about 90 days. Archias' 90-Day Yellow ears are about 10 inches long, sometimes two to the stalk; deep, moderately rough kernels high in protein and oil content make it an excellent feeding Corn. Price by mail, postpaid: 1 lb., 25c; 5 lbs., 60c. By freight or express: ½ bu., \$2.50; 1 bu., \$4.95; 5 bus., \$23.50.

MO. STATE CERTIFIED Midland Yellow Dent

A medium late maturing Yellow Corn, requiring normally 130 days to mature. The stalk is large compared with Reid's Yellow Dent. The ears average 7½ to 9½ inches long. Medium large in circumference, has a medium large cob. This variety is noted for its heavy yield and for its freedom from root rot diseases. Very few damaged ears. By mail, postpaid: 1 lb., 25c; 5 lbs., 60c. By freight or express: ½ bu., \$3.20; 1 bu., \$5.95; 2 bus., \$11.50; 5 bus., \$27.50.

HYBRID SEED CORN

FUNK'S "G" HYBRIDS *Home Grown*

FUNK'S HYBRID G-94

Medium to full season in maturity, this single-eared yellow hybrid has enjoyed an outstanding record through Northern and Central Missouri, and Kansas. Has the highest 2-year record in Kansas test—69.29 bushels in the Northwestern section. Is in the top two in Northern Missouri 2-year averages and in 1940 placed in the top group in both Central and Northern Missouri.

Leafy, dark green; grows to medium height, and stands up exceptionally well, surviving chinch bug and root worm attacks. Resistant to grasshoppers, heat, drought and Stewart's Disease. Its cold resistance allows it to be planted early, giving time to mature the large single ears of exceptional grain quality.

FUNK'S G-80

Full season in maturity (about one week later than G-94), a single eared yellow variety.

G-80 is a new, rapid growing, high yielding hybrid that has unusual stalk qualities enabling it to stand up even when storms level other corns. This hybrid has demonstrated its ability to withstand wind, drought, chinch bugs, Stewart's Disease and ear worms. It will deliver a rich golden harvest of excellent feeding quality, good deep kernel corn on soils of varying fertility levels. A winner in state yield tests and private trials, it is the answer to many of the corn growers' problems in Central and South Missouri and Kansas.

FUNK'S WHITE HYBRID

Medium to full season. A rapid growing, new white development which has yielded right up with yellow hybrids throughout our territory. Single ears.

FUNK'S G-135

For Grain or Silage.

G-135 is a leafy, medium-tall hybrid that is noted for its forage value, combining a heavy tonnage of ensilage or fodder with high grain content and succulent leaves and stalks. Late enough to excel most grain corns in tonnage, G-135 will mature from central Missouri and Kansas south and produce rich, golden ears. Resistance to heat, drought, disease and insects makes G-135 a dependable performer.

FUNK'S HYBRID G-53

Early in maturity, single eared yellow variety. Is suited for late planting over Kansas and Missouri. Best suited to good fertility, it also gives a good account of itself on average fields.

A favorite with feeders, G-53 has a dimple dent and is the softest corn we produce with high marketable and feeding value. Medium-height corn bears a single ear, medium low on the stalk. Stands up and holds the ear on the stalk and picks easily. Chinch bug, root-worm, cold, heat and drought resistant.

FUNK'S HYBRID G-169

Early maturity, single eared. Is recommended for northern Missouri and Kansas.

G-169 is a new, single eared yellow Hybrid with the ears carried at medium height, convenient for hand or mechanical picking. Superior stalk quality and excellent root system enable this Hybrid to stand up when less sturdy selections go down. G-169 produces a fine looking corn of excellent feeding quality.

FUNK'S G-711

Bred for the Southwest.

Here is a hybrid built from Southwestern germ-plasm that has the ability to withstand adversities of southern Missouri and southern Kansas. Developed for even tougher conditions, G-711 has rapid early growth, enabling it to get started and well-rooted before drought. Tall, heavy dark-green foliage and broad leaves resist summer conditions and it continues its growth to mature as a full-season corn. Has a fine record on soils of all fertilities and produces an excellent grain yield. G-711 produces ears of broad-kernel type, heavy and sound. G-711 has made a record for itself on the thinner soils of Pettis Co. this past season.

BROME GRASS

"THE MIRACLE DROUGHT RESISTER"

One of the most sensational additions that American agriculture has received in years. It is rather slow the first season, but the second year is great and once established you have it for keeps. It is hardy, permanent, stands the driest of droughts, the hottest summers, and the coldest winters. It is the first green grass in the spring, the last in the fall, and stays green all summer when other grasses are dry. It is very high in feeding value; will carry from 50 to 100 per cent more livestock per acre than Blue Grass. Cut for hay, you will have from three to four tons per acre. All classes of livestock like it as it is very palatable. It is a grass and so it cannot poison the stock. Sow either fall or spring using 15 to 20 lbs. per acre. Have a firm, well packed seed bed, harrow in lightly and roll well if at all possible. Do not cover too deeply—one-fourth to one-half inch is plenty. You can get two crops in a season. Harvest when it is one-third to one-half in bloom. It is easily killed under cultivation if you want to get rid of it. Our Brome Grass is Lincoln Strain, Achenbach (Southern Strain), Native Kansas Strain: 10 lbs., \$3.50, postpaid. See Field Seed List for quantity prices.

ALFALFA

Archias' northern and native grown Alfalfa deserves to rank first among legumes. Exeremely deep rooted, withstands drought as well as severe winters. It furnishes more green foliage, more pasture and dry hay per acre than any known variety of hay or grass. Plant Adapted Seed—approved for AAA payments. save money and get dependable seed by buying your Alfalfa from Archias. "Sure Brand" Kansas Grown. "Sure Brand" Nebraska Grown. "Sure Brand" Minnesota Grown. "Sure Brand" Genuine Grimm.

GERMAN MILLET

Sow 30 to 40 pounds to the acre **ARCHIAS' GOLDEN or GERMAN MILLET.** It is sown in the spring, and after harvesting leaves the ground in the finest condition for wheat. **PROSO MILLET.** Also known as Hog Millet. Grown almost exclusively for seed, yielding up to 60 to 70 bushels per acre. Excellent poultry feed. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. to the acre. Drill in close rows or broadcast

ALTA FESCUE Considered Better Than Kentucky 31

There's nothing like it. Heavy yielding wonder grass lives 20 years or more, is highly palatable, a summer producer, soil builder and weed eradicator. Alta Fescue produces as much or more fall and winter forage as other grasses adapted solely to those seasons. Produces more summer forage than all but the strictly summer-growing grasses. High feeding value and palatability. Rapid recovery after pasturing. Wide adaptability to soils, climate, and moisture. See Field Seed list for prices.

MISSOURI STATE CERTIFIED

Atlas Sorgo

Produces 15 to 20 Tons Fodder Per Acre.

The heaviest producing Sweet Sorgo known. Outyields corn 3 to 1. A matchless drought resister, Atlas remains green when corn is completely dried up. Atlas makes a palatable and very nutritious feed, especially for cattle. Grows 10 to 12 feet tall. Every farm should have at least 10 acres planted to this valuable crop. The grain makes an excellent chicken feed, too. We offer the genuine "Missouri State Certified" Atlas Sorgo. Certified seed is the cheapest and safest to buy.

5 lbs., \$1.25; 10 lbs., \$2.25, postpaid. See Red List for quantity prices.

Ladino White Clover

U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch, but grows twice as large." It is a long-lived perennial, excellent for grazing, as well as producing a most nutritious and palatable hay crop. Its tap root goes down one to three feet. The stems run on the ground, taking root. It is not subject to Alfalfa diseases and is ideal to plant after Alfalfa. It does not bloat livestock as much as other Clovers, but is safer to plant with Timothy, Red Top, Meadow Fescue, Kentucky Blue Grass, Orchard Grass and Rye Grass.

See Farm Seed Price List for quantity prices.

Orchard Grass

One of the best long-lived, deep-rooted grasses for year round pasture or hay or to reseed on old Alfalfa sods. It does well on practically every type of soil, including acid soils, thrives in the shade, grows vigorously and produces large crops of nutritious hay relished by all livestock. It recovers quickly when cut or grazed. It grows the year round with maximum growth in the spring and fall. Should be included in every hay or pasture mixture. Sow 14 lbs. per acre with other grasses or 30 to 35 lbs. alone in early spring or fall.

See Farm Seed Price List for quantity prices.

Broom Corn

(Evergreen.) A fine crop for dry land farming where there is a market for the straw for brooms. It has practically no food value. Plant in 3 1/2-foot rows, thinning out to stand 8 to 10 inches in the row and cultivate like Corn, 6 lbs. per acre.

New! Sweet Sudan Grass

SWEET SUDAN is a greatly improved Sudan Grass from a hybridization of Leota Red Sorghum on common Sudan. It has great palatability, livestock eating it to the ground before touching common Sudan or other forage Sorghums. SWEET SUDAN has broader leaves, larger stems and makes taller growth, stooling heavier than common Sudan. It is a truly great improvement over common Sudan, and in our opinion will completely replace common Sudan in a few years. We recommend that every farmer put in at least a part of his Sudan acreage with SWEET SUDAN to prove to himself the many advantages for both hay and grazing over common Sudan. Not recommended for pasture in sections where Sudan will sunburn as Sweet Sudan is a cross with Leota Cane.

See Price List for quantity prices.

"Certified" Sudan Grass

Sudan Grass is primarily a hay grass, its slender leafy stems making it easy to handle with ordinary haying machinery. It makes its greatest growth and produces the most feed during July, August and September, when native grasses are less productive. It can be grown successfully on almost every class of soil from a heavy clay to a light sand, besides being particularly drought and heat resistant. Primarily an excellent hay crop, Sudan is gaining in popularity as a summer pasture. Ready to cut in 45 days. Sow after the ground becomes thoroughly warm, preferably broadcast at the rate of 20 to 25 pounds per acre. A grain drill may be used, set to sow two pecks of wheat. Cut when in bloom, for at that stage the feeding value is highest.

See Price List for quantity prices.

Permanent Pasture Mixtures

Sow 30 to 35 lbs. per acre.

Pasture is the most economical source of feed for live stock. Our pasture mixtures are made up of the highest quality, high germinating seeds. We use only the best in all our mixtures.

See Field Seed price list that came with this catalog for prices.

For a permanent pasture on fertile, well-drained soil, containing grasses and clovers in the proper proportion as recommended by our Universities; contains Kentucky Blue Grass, Timothy, Sweet Clover, Brome Grass.

Pasture Mixture No. 2

For permanent pasture on well-drained soil, with medium fertility, containing grasses and Lespedeza in proper proportions as follows: Orchard Grass, Red Top, Canada Blue Grass, and Korean Lespedeza.

Alsike-Timothy Mixture

(20 to 25% Alsike, balance Timothy.)

This is a properly balanced Timothy-Alsike mixture, excellent for pasture and meadow seeding, particularly valuable for soils that will not grow other clovers.

Brome-Alfalfa Mixture

Proper combination for Pasture Mixture 70% Native Grown Brome Grass, 30% Alfalfa.

Experiments have shown clearly that you can expect maximum results over the longest period of years by growing Brome in combination with Alfalfa or some other legume, Alfalfa has proven best.

The Alfalfa feeds nitrogen to the Brome so that it does not become "sod bound." Thus the Brome grows taller and has a higher feeding value. Brome in turn holds up the Alfalfa.

This mixture we offer contains 70% best native grown Brome grass and 30% our best Kansas grown Alfalfa. Sow this at the rate of 15-20 lbs. per acre.

LIME FOR LAWNS AND GARDENS

This is an excellent tonic—sweetens the soil, stimulates growth, deepens color, improves quality, releases nitrogen for plant food and aids blooming. Flowers in pots, boxes or in the garden, vegetables and also fruit and ornamental trees and shrubs show marked increase in growth and beauty by a liberal application of lime. Apply about 1/2 lb. to 1 square yard surface and rake in gently. This should be done before planting or after plants are several inches high. Lawns are particularly benefited by the application of lime—do not confuse this special lime with hydrated or whitewash lime, which will burn vegetation. F.o.b. Sedalia.

Wheels, combination agitator and shaft are made of cold rolled steel. Wood lawn mower-type handle. Sturdy, dependable; will render long service. Shipping weight 15 pounds, \$5.95, not prepaid. 20 in., \$9.95, each.

When Zotox is applied in the Minimum Solution it kills Crab Grass without destroying permanent lawn grasses. The selective action attributed to the fact that Crab Grass has broader leaves and absorbs more of the chemical than do the narrow-leaved turf grasses. Being a shallow-rooted annual also makes Crab Grass less resistant to Zotox than are the deep-rooted perennial grasses. Zotox is sold in four convenient sizes.

An 8-oz. bottle treats 1000 to 2000 square feet.
